

ZFPH-FDC, ZFPH-RH850, ZFPH-MQBX Cable Software Package Module Matching Guide

Dear Distributors,

You can see step-by-step how to activate the software packages of your **ZFPH-FDC**, **ZFPHRH850** and **ZFPH-MQBX** cables via your Zed-FULL plus device..

To define the software package and activate the software for these cables, simply follow the steps below in order:

Software Package Matching Steps

• Step 1: Establish Wi-Fi Connection via Zed-FULL plus

For the matching process to be verified online by our system servers, your **Zed-FULL plus** device must be connected to an active Wi-Fi network. Software package definition cannot be performed without an internet connection.

• Step 2: Enter the Module Matching Menu and Scan the Module

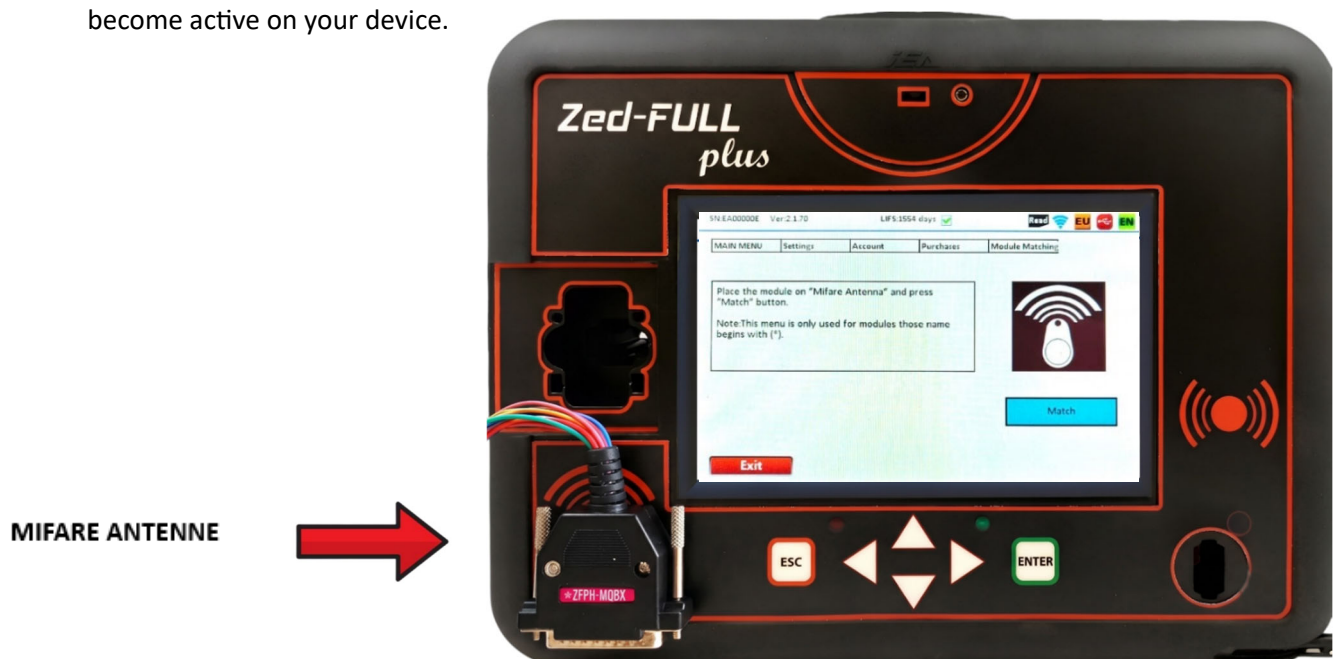

While your device is connected to the internet, follow these steps in order from the main menu to reach the relevant screen:

SETTINGS → ACCOUNT → PURCHASES → MODULE MATCHING

After entering this screen, scan the module you purchased by bringing it close to the **Mifare antenna** located on the Zed-FULL plus device.

• Step 3: Complete Module Matching

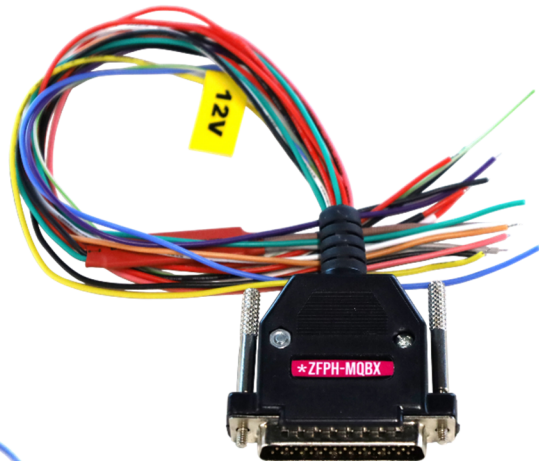

Your device will verify the module information read by the Mifare antenna online over the internet through the specified menu path. Following verification, the software package of your respective cable (**ZFPH-FDC**, **ZFPH-RH850** or **ZFPH-MQBX**) will automatically become active on your device.

Cables and Software Package Names:

ZFPH-FDC: **PO-FIA15**

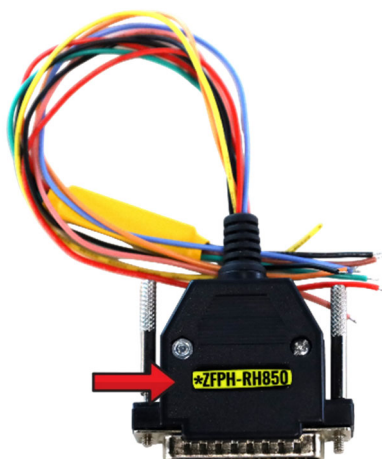

ZFPH-MQBX: **PO-VAG16**

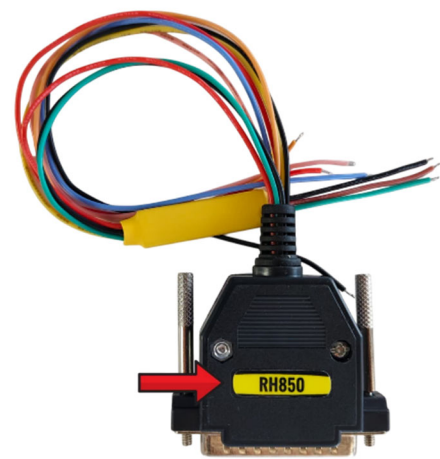

ZFPH-RH850: **PO-REN24**

- Please check the label on the product. Some stock codes are written with an asterisk (*), and some are written without an asterisk. If there is an asterisk (*) in the stock code, you can activate the module pairing via Zed-FULL plus or the software package from the IEA portal. If there is no asterisk on the product label, the software package can only be activated from the IEA portal.

- **Label with Asterisk:**

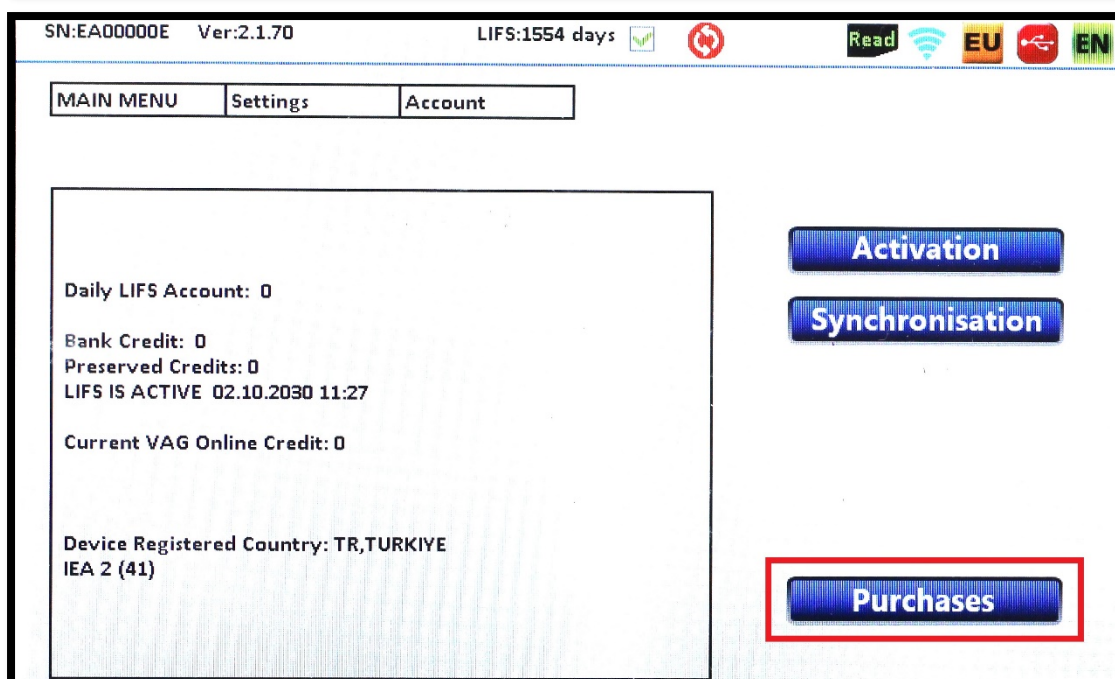

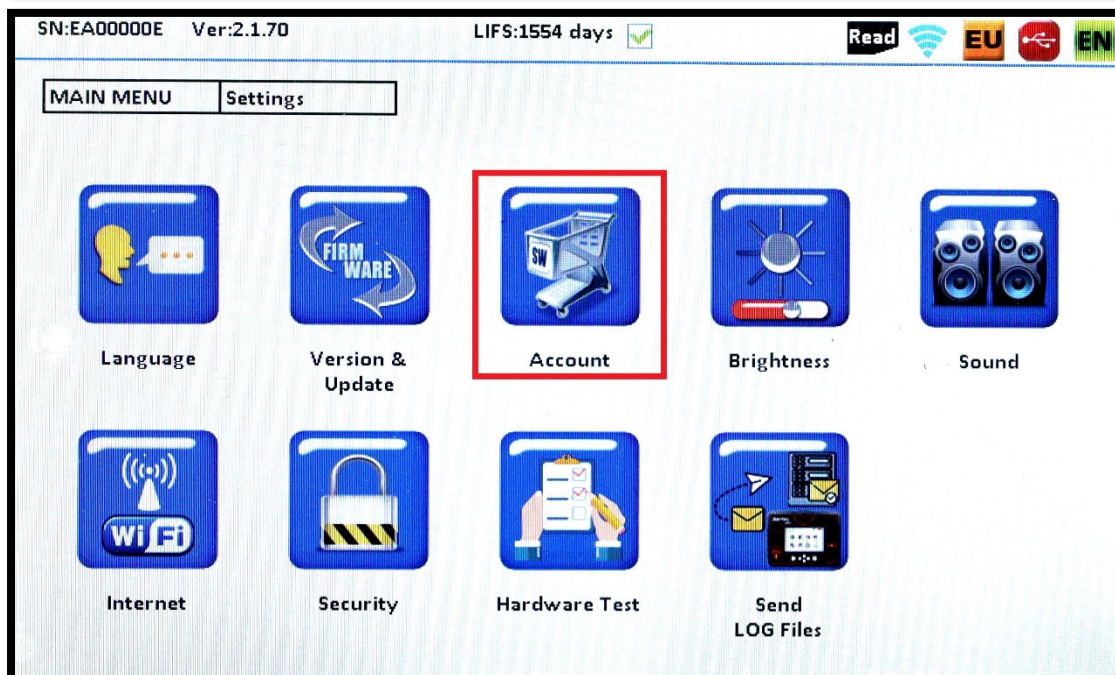

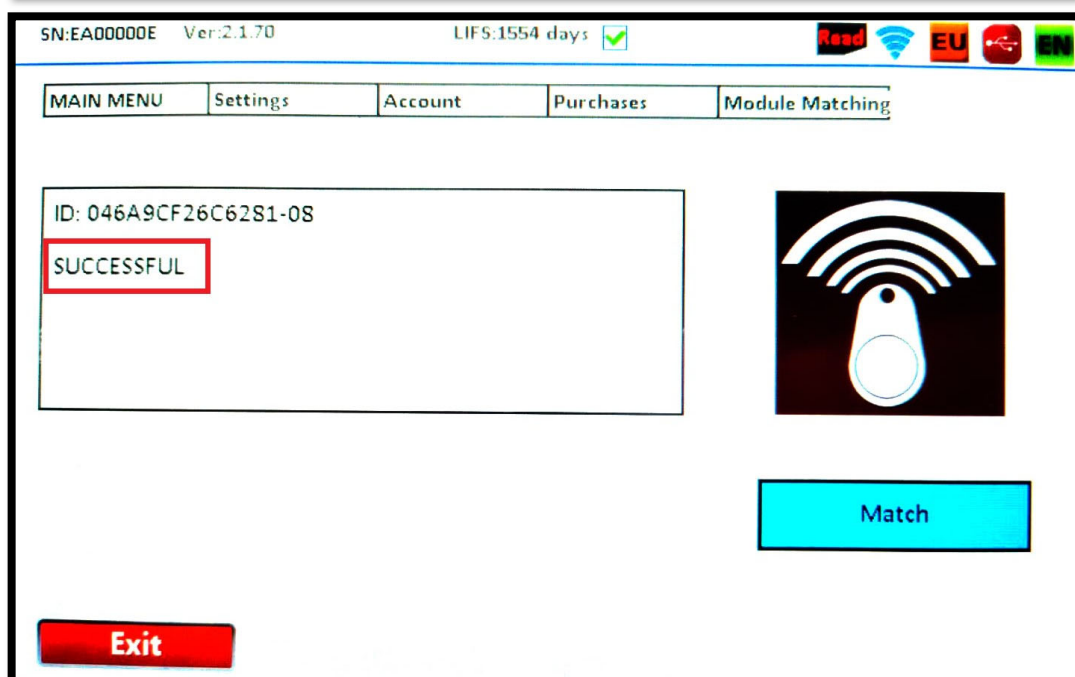

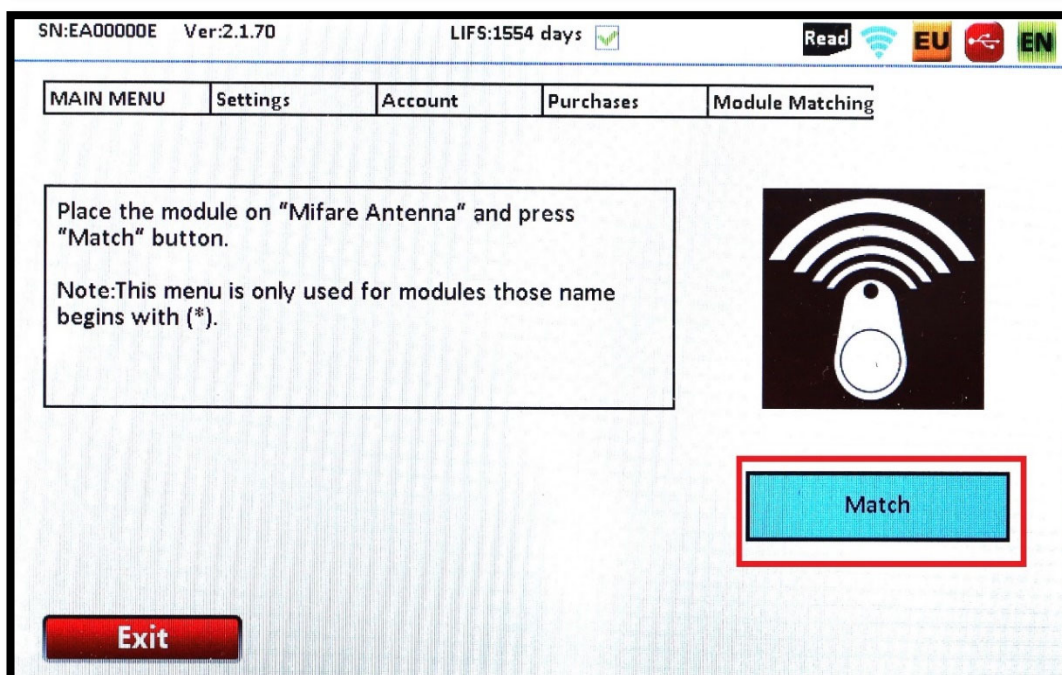

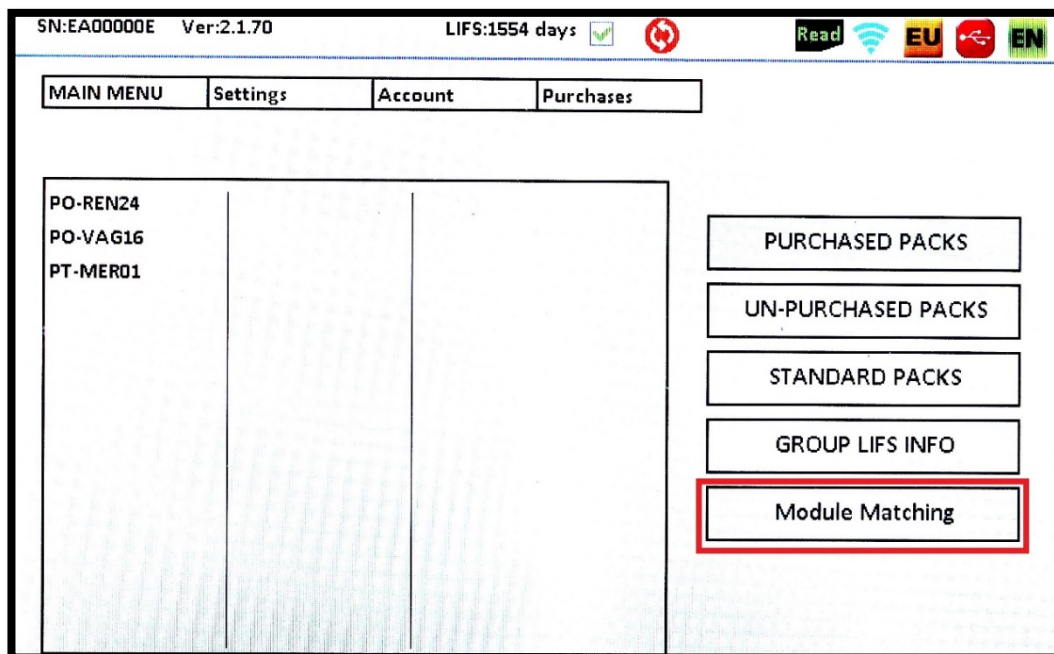

Label without Asterisk:

- From this date forward, you will always be sent products with asterisks. There is absolutely no change in the operation of this product. Only the software package installation step has been improved.

How to perform module activation:

- On devices where the package installation was previously completed, module pairing is not required.
